Question	Answer
Will the book be available also in epub format?	Yes, it will be via Van Haren Publishing’s global distributions partners such as Amazon from the publication date onward.
Is the new version a restructuring to orient to TOGAF ADM, and chapters repositioned for a theme of flow for architects?	It is not a restructuring to a TOGAF oriented structure from an ADM perspective. The Practice can be seen as following the balls A-F from TOGAF and/or the layers of Archimate 3.1
As most of the newer architectures are federated models, can u show us examples or share how to create federated architectures using BIAN.?	The case is showing 2 possible dimensions to partition or federate the architecture i.e. “country” and “line of business, in this example “International Payments” and “Domestic Payments”.
<p>Is it a version change of BIAN or just the book?</p> <p>Has metamodel, or any other thing, the way BIAN as theory or implementation changed in this book?</p> <p>What is the impact on certifications courses?</p>	It is a version change of the book. The book describes BIAN at the moment of writing. When there is a new version of BIAN there will be no new version of the book. A new version of the book will be written independent from the versioning of BIAN.
What is the impact on certifications courses?	There is a brand-new certification course that comes with the introduction of the second version of the book. The content of the exam is mostly the same. Some additional questions on Business Capabilities and Business Object Model. The phrasing of the questions can also be different, related to the phrasing in the book.
Can we find example of mapping between ISO20022 to APIs?	<p>Members can download the mapping at the BIAN</p>  <p>member wiki</p>

Any chance to buy a bundle with hardcopy + digital copy together?	Please email to info@vanharen.net and I think we are able to support you with this. – Maurits van der Plas

What do you mean by semi real-life examples?	The full case is inspired on a real-life change program to rationalise the payment application landscape. Only minor changes were made to make it
How would you use this common framework as a common data model that would be used for data in/out of micro services?	You can use the “Control Record model” or the “Service Domain Business Object Model” for that.
Where can I get the book?	You can already pre-order at https://www.vanharen.store/bian-2nd-edition-a-framework-for-the-financial-services-industry
