BIAN Content Release 11.0

December 13, 2022 | Q&A

| Question | Answer |
|---|---|
| <p>If we want to adapt BIAN v.11 (instead of previous version), where can we get changes comparison to previous version (s)?</p> <p>How can we upload full model of v.11 in Excel?</p> | <p>All the release information for the current and the previous versions can be found on the members wiki https://biancoreteam.atlassian.net/wiki/spaces/SL/pages/1259883/Documents</p> |
| <p>How can we drive mass adoption of BIAN Standards? Look at SWIFT and the mX formats... they are driving it hard.... It really helps if more and more application vendors adopt BIAN</p> | <p>We try to drive mass adoption by launching product certification in 2023 and focus more on implantation examples plus providing tools to easily adopt BIAN</p> |
| <p>Any plans to introduce Insurance business in BIAN?</p> | <p>We will add Insurance after completion of the Banking domains. Previous projects shows that the current BIAN Model provides a 80-85% coverage for Insurance. Domains like Claims Handling are missing.</p> |
| <p>Do you provide detail instruction how to download those models and where to get the tool for edit those models when I want to customize it. Such like SD/Control record/Service operator...?</p> | <p>Contact our program manager Arnab Mitra (arnabmitra@bian.org) . He will route to the person who can help in the specific case you want to contribute.</p> |
| <p>Is the BIAN version 11. service landscape updated. I see a note that card capture is now renamed as card transaction SD, but website is still having card capture as SD</p> | <p>Oops ... will correct this.</p> |
| <p>Do you have plans (2023?) to have a 100% relationship mapping between service domains and business capabilities up to level 3?</p> | <p>This is a planning issue for the Business Capability working group. It will not be a link in the sense that "Business Capability = Service Domain". It will always be "Business Capability" served by "one or more "Service Domains".</p> |
| <p>Could you explain how behaviour qualifiers change service domains?</p> | <p>Behaviour Qualifiers are not changing Service Domains but are "detailing" the Service Operations and Control Record models. It is making the definition of the Service Domain more specific.</p> |
